

**ATTACHMENT B**  
**Amendments to the Specification**

**Please amend the title as follows:**

CIRCULAR DISPENSING CONTAINER WITH A HINGED LID

**Please replace paragraph [0003] with the following amended paragraph:**

**[0003]** One known conventional dispensing container has a torodial-shaped body. ~~To open this package, pressure applied to the pack opens a small lid, allowing mints to be tipped out.~~ with a flip top lid. The lid has a depressable, actuator portion and tab portion. The lid covers nearly the entire top surface of the container while each portion covers approximately one half thereof. Upon depressing the actuator portion, the tab portion flips upward to its opened position, thereby exposing a small opening in the top surface of the container located at a mid-point of the top surface which is covered by the tab portion.
